Superintendent

HEALTH PLAN CRITERIA & GUIDELINES

The student's individual health plan is a tool to summarize current health information. The Health Plan will be developed by the school nurse for students having special health care needs including:

1. Students whose medical condition is unstable or may require emergency medical intervention.
2. Students who require various health/medical procedures during the school day.
3. Students who require use of a particular device or equipment that compensates for loss of a particular body function necessary to sustain life.
4. Students who are identified by the school nurse as having special or significant health/medical conditions.

The Health Plan may address:

1. Relevant health information
 - a. Medical diagnosis
 - b. Projected health needs and medical treatment
 - c. Mobility status
 - d. Other (i.e. vision impairment, allergies)
2. Medication to be administered at school
3. Parental concerns
4. Various health/medical procedures required during the school day

Health plans will be updated as needed by the school nurse. They should be attached to the current IEP.
